Solomon Casspi - Recommendation Letter

Dear Sir/Madam,

It is my great pleasure to write this letter in support of Solomon's application for the Darom Doctoral Fellowship. Solomon is expected to start his PhD under my supervision in Fall 2022. Solomon's masters research deals with compensation for mismatches and calibration in automotive radar. In his studies, Solomon combines principled mathematical concepts from estimation theory with hardware-aware and application oriented algorithmic derivations. His research work shows both high analytical skills, which are essential for successful theoretical studies, as well as dedication, hard work, creativity, and independence. Solomon's masters' results are nowadays being finalized as scientific paper which will be submitted as a paper to the prestigious IEEE Transactions on Signal Processing, indicating his research achievements. In my opinion, the ability to integrate theoretical knowledge with concrete applicative and hardware considerations, as demonstrated in Solomon's research, is a key and non-trivial skill, which is extremely advantageous in the research areas of model-based deep learning for stochastic control we intend to pursue in his PhD.

As a final note, I believe that Solomon possesses all the abilities of an outstanding graduate student: he is sharp-minded, extremely hard-working and dedicated, and does not leave a stone unturned in his research work. I would be honored to supervise Solomon in his PhD studies. I am certain that we can make exciting contributions in the emerging area of model-based deep learning for stochastic control. I thus believe that being granted the Darom Doctoral Fellowship will be a major leap for Solomon, and I strongly recommend the committee to approve his application.

Sincerely,

Dr. Nir Shlezinger
