Subject: Mr. Solomon Casspi – Letter of recommendation

I am writing this letter in support of Mr. Solomon Caspi's application for Ph.D. studies and for the Negev Fellowship. Solomon is in the final stages of his M.Sc. studies in Tel-Aviv University, under my supervision (joint supervision with Prof. Hagit Messer-Yaron. In his thesis research, we have developed an algorithm for the blind calibration of antenna arrays in automotive radar applications. In his studies, Solomon combines principled mathematical concepts from estimation theory with hardware-aware and application oriented algorithmic derivations. His research work shows both high analytical skills, which are essential for successful theoretical studies, as well as dedication, hard work, and independence. Solomon's master results is in now being summarized as a journal paper which will be submitted to the IEEE Transactions on Signal Processing. In my opinion, the ability to integrate theoretical knowledge with concrete applicative and hardware considerations, as demonstrated in Solomon's research, is a key and non-trivial skill, which is extremely advantageous in the future research work areas that he will intend to pursue in his Ph.D. studies. I believe that Solomon possesses all the abilities of an outstanding graduate student: he is sharp-minded, extremely hard-working and dedicated, and does not leave a stone unturned in his research work. Since Solomon intends to give his full attention to his Ph.D. studies, I thus believe that being granted the Negev Fellowship will be a major leap for Solomon, and I strongly recommend the committee to approve his application for Ph.D. studies and grant him the Negev Fellowship.

Sincerely,

Prof. Joseph Tabrikian
